HYLTON, ROBIN ANNETTE

ART UNIT PAPER NUMBER

3727

DATE MAILED: 12/02/2002

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

09/658,374

Applicant(s)

PETERSON ET AL. *CH*

Examiner

Robin Hylton

Art Unit

3727

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 26 September 2002.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-18 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the knife edge seal of the filter media penetrating a bottom surface of the filter media must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

2. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: "the unitary filter media being sealed with the housing by direct engagement with the alloy comprising the housing".

Claim Objections

1. Claims 3, 16 and 18 are objected to because of the following informalities:
- "from" is misspelled in claim 3, line 2;
 - "press" is misspelled in claim 16; and
 - there is no period at the end of claim 18.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. Claim 14 is rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had

Art Unit: 3727

possession of the claimed invention. There is no disclosure, as originally filed, for a knife edge seal penetrating a bottom surface of the filter medium. This is contradictory to the disclosure at page 4, lines 19-22). This is a **new matter** rejection.

3. Claims 14-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Specifically, the claims are rejected for the following reasons:

Claim 14 recites the limitation "the filter medium" in line 3. There is insufficient antecedent basis for this limitation in the claim.

The structure of the filter media is not clearly set forth in claim 14. How does the annular knife edge seal penetrate a bottom surface of the filter media?

Dependent claims not specifically mentioned are rejected as depending from rejected base claims since they inherently contain the same deficiencies therein.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Art Unit: 3727

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,413,304. Although the conflicting claims are not identical, they are not patentably distinct from each other because each teaches an enclosure vent having a carbon filter within a housing for venting gas. The claims of the instant invention further include material specifications and filtering specifications. It would have been obvious to one of ordinary skill in the art at the time the invention was made to eliminate the specific material and filtering specifications of the instant invention to provide the claimed vent of the patent since each function to filter gas in an associated container.

6. Claim 1 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 6,395,050. Although the conflicting claims are not identical, they are not patentably distinct from each other because each teaches an enclosure vent having a carbon filter within a housing for venting gas. The claims of the instant invention further include material specifications and filtering specifications. It would have been obvious to one of ordinary skill in the art at the time the invention was made to eliminate the specific material and filtering specifications of the instant invention to provide the claimed vent of the patent since each function to filter gas in an associated container.

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

2. Claims 1,2,7 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brassell et al. (4,500,328) in view of Kalota et al. (US 4,996,369).

Art Unit: 3727

Brassell teaches an enclosure vent comprising a housing 1 having first and second openings and a unitary filter element, by applicant's disclosure, providing the claimed hydrogen permeability, a radially extending flange and an annular shoulder (the lower end of the vent) for supporting the filter media, the filter media is sealed with the housing by direct engagement with the alloy comprising the housing since the filter contacts at least a portion of the housing.

Brassell is silent regarding the material of the housing.

Kalota teaches it is known to provide a corrosion resistant vessel of nickel-molybdenum-chromium alloy (col. 3, lines 7-8).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the teaching of a corrosion-resistant alloy, and in particular nickel-molybdenum-chromium alloy, to the enclosure vent housing of Brassell. Doing so would ensure the integrity of the enclosure vent for a long period of time.

3. Claim 3-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 1 above, and further in view of Wickland et al. (US 5,277,707).

Brassell teaches the claimed enclosure vent except for a plurality of holes in the lid.

Wickland teaches a venting enclosure having a perforated lid.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the teaching of a plurality of holes to the modified lid of Brassell. Doing so allows for more venting of the container.

4. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 7 above, and further in view of Carpinella (US 5,686,700).

Brassell as modified teaches the claimed enclosure vent except for a shelf for receiving the lid in a press fit.

Art Unit: 3727

Carpinella teaches a closure having a shelf **44** for receiving a lid **24** in a press fit within the housing wall.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to further apply the teaching of a shelf for receiving the lid in press fit arrangement within the housing wall. Doing so would allow for a smooth upper surface of the housing.

5. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 8 above, and further in view of Seibert et al. (US 5,353,949).

Brassell teaches the claimed enclosure vent except a gasket disposed adjacent the flange portion.

Seibert teaches an enclosure vent having the gasket disposed adjacent the flange portion.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to further apply the teaching of a gasket disposed adjacent the flange portion of Brassell. Doing so would seal the opening between the enclosure vent and the associated enclosure as is well known in the art.

6. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 8 above, and further in view of Ward (US 4,231,488).

Brassell as modified teaches the claimed enclosure vent except for the flange portion being fixed to the wall by a weld.

Ward teaches it is known to secure a closure to a wall of an enclosure.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to further apply the teaching of fixing the flange portion of the modified enclosure vent of Brassell to an enclosure wall. Doing so is a well-known method of securing a closure to an enclosure in the container art.

Art Unit: 3727

7. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 9 above, and further in view of Ward.

Brassell as modified teaches the claimed enclosure vent securing enclosure vent to the enclosure lid by a weld.

Ward teaches it is known to secure a closure to a wall of an enclosure.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to further apply the teaching of fixing the flange portion of the modified enclosure vent of Brassell to an enclosure lid. Doing so is a well-known method of securing a closure to an enclosure in the container art.

8. Claims 1,2,12,13,18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brassell et al. (US 6,041,669) in view of Brassell '328 and Kalota.

Brassell '669 teaches a vent enclosure having an enclosure vent. The disclosed enclosure vent does not have the structure of that claimed and is silent regarding the material of the housing.

Brassell '328 teaches an enclosure vent comprising a housing 1 having first and second openings and a unitary filter element.

Kalota teaches it is known to provide a corrosion resistant vessel of nickel-molybdenum-chromium alloy (col. 3, lines 7-8).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply substitute the enclosure vent of Brassell '328 for the enclosure vent of Brassell '669 and to utilize a corrosion-resistant alloy of nickel-molybdenum-chromium to form the enclosure vent. Doing so would ensure the integrity of the enclosure vent for a long period of time and provide an enclosure vent that prohibits release of pollutants into the atmosphere.

Art Unit: 3727

Regarding claim 12, it would have been obvious to one having ordinary skill in the art at the time the invention was made to select the corrosion rate of the alloy to be no greater than 2 mils per year under the specified conditions, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art.

Regarding claim 13, it would have been obvious to one having ordinary skill in the art at the time the invention was made to select the corrosion rate of the various chemical compounds set forth in the claim, since it has been held that discovering an optimum value of a result effective variable involves only routine skill in the art.

9. Claim 3-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 1 above, and further in view of Wickland.

Brassell as modified teaches the claimed enclosure vent except for a plurality of holes in the lid.

Wickland teaches a venting enclosure having a perforated lid.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to apply the teaching of a plurality of holes to the modified lid of Brassell. Doing so allows for more venting of the container.

10. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 7 above, and further in view of Carpinella.

Brassell '669 as modified teaches the claimed enclosure vent except for a shelf for receiving the lid in a press fit.

Carpinella teaches a closure having a shelf **44** for receiving a lid **24** in a press fit within the housing wall.

Art Unit: 3727

It would have been obvious to one of ordinary skill in the art at the time the invention was made to further apply the teaching of a shelf for receiving the lid in press fit arrangement within the housing wall. Doing so would allow for a smooth upper surface of the housing.

11. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 8 above, and further in view of Seibert.

Brassell '669 teaches the claimed enclosure vent except a gasket disposed adjacent the flange portion.

Seibert teaches an enclosure vent having the gasket disposed adjacent the flange portion.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to further apply the teaching of a gasket disposed adjacent the flange portion of Brassell '669. Doing so would seal the opening between the enclosure vent and the lid opening as is well known in the art.

12. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 8 above, and further in view of Ward (US 4,231,488).

Brassell '669 as modified teaches the claimed enclosure vent except for the flange portion being fixed to the wall by a weld.

Ward teaches it is known to secure a closure to a wall of an enclosure.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to further apply the teaching of fixing the flange portion of the modified enclosure vent of Brassell '669 to an enclosure wall. Doing so is a well-known method of securing a closure to an enclosure in the container art.

13. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 9 above, and further in view of Ward.

Art Unit: 3727

Brassell '669 as modified teaches the claimed enclosure vent securing enclosure vent to the enclosure lid by a weld.

Ward teaches it is known to secure a closure to a wall of an enclosure.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to further apply the teaching of fixing the flange portion of the modified enclosure vent of Brassell '669 to an enclosure lid. Doing so is a well-known method of securing a closure to an enclosure in the container art.

14. Claim 1 rejected under 35 U.S.C. 103(a) as being obvious over Wickland 304.

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(l)(1) and § 706.02(l)(2). Claim 1 of the instant invention and claim 1 of the patent both teach an enclosure vent having a carbon filter within a housing for venting gas. The claims of the instant invention

Art Unit: 3727

further include material specifications and filtering specifications. It would have been obvious to one of ordinary skill in the art at the time the invention was made to eliminate the specific material and filtering specifications of the instant invention to provide the claimed vent of the patent since each function to filter gas in an associated container.

15. Claim 1 is rejected under 35 U.S.C. 103(a) as being obvious over Wickland '050.

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). For applications filed on or after November 29, 1999, this rejection might also be overcome by showing that the subject matter of the reference and the claimed invention were, at the time the invention was made, owned by the same person or subject to an obligation of assignment to the same person. See MPEP § 706.02(l)(1) and § 706.02(l)(2). Claim 1 of the instant invention and claim 1 of the patent both teach an enclosure vent having a carbon filter within a housing for venting gas. The claims of the instant invention further include material specifications and filtering specifications. It would have been obvious to one of ordinary skill in the art at the time the invention was made to eliminate the specific

Art Unit: 3727

material and filtering specifications of the instant invention to provide the claimed vent of the patent since each function to filter gas in an associated container.

Allowable Subject Matter

16. Claims 14-27 appear to be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Response to Arguments

17. Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

18. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lula and Carey, II et al both teach it is known to utilize nickel-molybdenum-chromium alloy for corrosion resistance.

19. Applicant has the duty to disclose other pending related patent applications, but did not in this instance. The newly discovered references of Wickland et al. (US 3,395,050 and 6,413,304) were only discovered by the examiner in response to applicant's amendment filed September 26, 2002.

20. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period

Art Unit: 3727

will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

21. In order to reduce pendency and avoid potential delays, Group 3720 is encouraging FAXing of responses to Office Actions directly into the Group at (703) 305-3579. This practice may be used for filing papers not requiring a fee. It may also be used for filing papers which require a fee by applicants who authorize charges to a PTO deposit account. Please identify the examiner and art unit at the top of your cover sheet. Papers submitted via FAX into Group 3720 will be promptly forwarded to the examiner.

22. It is called to applicant's attention that if a communication is faxed before the reply time has expired, applicant may submit the reply with a "Certificate of Facsimile" which merely asserts that the reply is being faxed on a given date. So faxed, before the period for reply has expired, the reply may be considered timely. A suggested format for a certificate follows:

I hereby certify that this correspondence for Application Serial No. _____ is being facsimiled to The U.S. Patent and Trademark Office via fax number (703) 305-3579 on the date shown below:

Typed or printed name of person signing this certificate

Signature_____

Date_____

23. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robin Hylton whose telephone number is (703) 308-1208. The examiner works a flexible schedule, but can normally be reached on Monday - Friday from 8:30 a.m. to 1:30 p.m. (Eastern time).

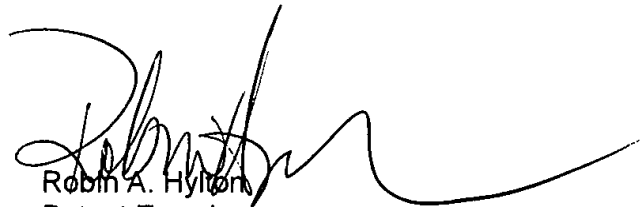

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Lee Young, can be reached on (703) 308-2572.

Art Unit: 3727

If in receiving this Office Action it is apparent to applicant that certain documents are missing, e.g., copies of references cited, form PTO-1449, form PTO-892, etc., requests for copies of such papers should be directed to Errica Bembry at (703) 306-4005.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-1148.
